HAN, JASON

ART UNIT

PAPER NUMBER

2875

DATE MAILED: 12/02/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

H.A

<b>Office Action Summary</b>	Application No. 10/732,987	Applicant(s) FYE ET AL.	
	Examiner Jason M. Han	Art Unit 2875	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 29 September 2005.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1,3-5 and 7-27 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,3-5 and 7-27 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 11 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to Claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.
2. With regards to Applicant's similar argument to Fujita et al. (U.S. Patent 65517213), it remains clear that the substrate, as claimed by applicant, of Fujita [Figure 19: (214-217)] is operative to selectively attenuate intensity and frequency shift light passing therethrough via the fluorescent plate [Figure 19: (214)] and diffusion plate [Figure 19: (215)], whereby, as broadly interpreted, it is commonly known that a fluorescent plate or filter will attenuate light intensity and frequency shift via altering the illumination in producing a different hue/color.

---

The following claims have been rejected in light of the specification, but rendered the broadest interpretation as construed by the Examiner [MPEP 2111].

---

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Art Unit: 2875

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 3-5, 7-10, 21-22, 24, and 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Fujita et al. (U.S. Patent 6517213).
4. With regards to Claim 1, Fujita discloses a backlit display including:
  - At least one light source [Figure 19: (212)];
  - A backlit component [Figure 19: (218)]; and
  - A light-transmitting substrate [Figure 19: (214-217)] incorporating a polymer material [Column 19, Lines 33-43], a diffusing material [Figure 19: (215)], and at least one fluorescing material [Figure 19: (214)], wherein the light-transmitting substrate is intermediately located between the light source and the backlit component such that the backlit component passes light through at least one selected portion of said substrate, wherein said substrate is operative to selectively attenuate intensity and frequency shift light passing therethrough.
5. With regards to Claim 3, Fujita discloses the diffusing substance including an inorganic filler [Column 19, Lines 33-35].
6. With regards to Claim 4, Fujita discloses a light-passing coating layer [Figure 19: (214)] disposed between the substrate and an opaque layer [Figure 19: (211)].
7. With regards to Claim 5, Fujita discloses the light-passing coating layer [Figure 19: (214)] being colored to reflect a daytime graphics color [Column 19, Lines 12-16].
8. With regards to Claim 7, Fujita discloses the fluorescent material being chosen based on a characteristic light spectrum of the light source and a desired light spectrum

Art Unit: 2875

externally viewable from a graphic on the backlit component [Column 19, Lines 12-20; Column 20, Lines 39-47].

9. With regards to Claim 8, Fujita discloses the light source being a light emitting diode [Column 18, Lines 6-7].

10. With regards to Claim 9, Fujita discloses the light source being a blue light emitting diode [Column 18, Lines 38-40].

11. With regards to Claim 10, Fujita discloses the backlit component being a button [Column 23, Lines 39-44] and the passing of light through at least one selected portion of said substrate being facilitated by a graphics area formed about a surface of the button [Figure 19: (216); Column 19, Lines 36-38].

12. With regard to Claims 21-22, 24, and 26, Fujita discloses the substrate [Figure 19: (214-217)] includes a contour with constant thickness, flatness, and box-shaped.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. Claims 11-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujita et al. (U.S. Patent 6517213) as applied to Claims 1 and 10 above, and further in view of Ogawa (U.S. Patent 5403984).

Art Unit: 2875

14. With regards to Claim 11, Fujita discloses the claimed invention as cited above, but does not specifically teach a light pipe intermediately positioned in the button that is located between the substrate and the light source.

Ogawa teaches a button [Figure 3: (4)] wherein a light pipe [Figure 3: (31, 31a)] is intermediately disposed therein between a substrate [Figure 3: (43)] and a light source [Figure 3: (13)].

It would have been obvious to one ordinarily skilled in the art at the time the invention was made to modify the button of Fujita to incorporate the light pipe of Ogawa in order to remotely and efficiently transfer the illumination to the substrate/specific area from the light source.

15. With regards to Claim 12, Fujita discloses the claimed invention as cited above, but does not specifically teach the button being positioned over a discrete silicon rubber switch dome and a circuit board.

Ogawa teaches a button [Figure 3: (4)] over a discrete silicon rubber switch dome [Figure 3: (24)] and a circuit board [Figure 3: (22)].

It would have been obvious to one ordinarily skilled in the art at the time the invention was made to modify the button of Fujita with the discrete silicon rubber switch dome and circuit board of Ogawa in providing actuation for said button by a user.

16. With regard to Claims 13-14, Fujita in view of Ogawa discloses the claimed invention as cited above. In addition, Fujita [Figure 19: (211)] and Ogawa [Figure 3: (3A)] teach a button wherein a cavity is defined, however, Fujita does not specifically

Art Unit: 2875

teach reflective and opaque sidewalls of the cavity that reflect light toward the selected portion of the substrate.

Ogawa teaches the sidewalls of the cavity being made of a reflective and opaque material [Figure 3: (3A)].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the sidewalls of the cavity out of a reflective and opaque material, as taught by Ogawa for the purpose and advantage of increasing the light transmitted from the sidewalls.

17. With regard to Claims 15-17, Fujita in view of Ogawa discloses the claimed invention as cited above. Fujita fails to specifically teach a trim plate positioned over a circuit board, whereby a graphics area formed about a surface of the trim facilitates the passing of light through at least one selected portion of the substrate, nor teaches a rotary knob positioned about the trim plate.

Ogawa teaches a trim plate [Figure 3: (1)] positioned over a circuit board [Figure 3: (22)], wherein a passing of light occurs through a selected portion/rotary knob [Figure 3: (4)], including an integral light pipe [Figure 3: (31)] with a visible light-transmitting surface [Figure 3: (31a)], about a surface of said trim plate. In addition, Ogawa teaches a substrate [Figure 3: (32)] spaced above a light source [Figure 3: (13)] and the circuit board by a distance such that the substrate is positioned about a common plane extending from a base portion of the knob.

It would have been obvious to one ordinarily skilled in the art at the time the invention was made to modify the button with graphics of Fujita to incorporate the trim

Art Unit: 2875

plate of Ogawa in order to provide an aesthetic appeal and protect the electrical components of the backlit display. Such trim plates are commonly associated with buttons and known in the art. In addition, it would have been obvious and advantageous to facilitate a knob switch, as taught by Ogawa, whereby a knob may provide a user with control over an intermediate state of the switch.

18. Claims 23, 25, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujita et al. (U.S. Patent 6517213).

Fujita discloses the claimed invention as cited above, but does not specifically teach the substrate having a contour of varying thickness (re: Claim 23), of hemispherical shape (re: Claim 25), nor of cylindrical shape (re: Claim 27).

However, it would have been an obvious matter of design choice to incorporate the substrate with a contour of varying thicknesses, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955). In this case, altering the thickness of the substrate could allow for varying optical effects on the illumination to a desired preference. It also would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the substrate into various shapes, since it has been held to be within the general skill of a worker that mere change of form or shape of an invention involves only routine skill in the art. *Span-Deck Inc. c. Fab-Con, Inc.* (CA 8, 1982) 215USPQ 835. As mentioned above, varying the shape of the substrate would allow for varying optical

Art Unit: 2875

effects on the illumination, as well as provide for an aesthetic appeal and easy usability with different shaped buttons.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason M. Han whose telephone number is (571) 272-2207. The examiner can normally be reached on 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra O'Shea can be reached on (571) 272-2378. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
